

RIG ACCESSORIES

LOW PROFILE - PIPE WIPERS

Texas Products WSD low profile pipe wipers remove mud and debris from the pipe while it is being pulled or run. It's nine inch rubber wiper disc encircles the pipe tightly and covers the annulus to prevent foreign objects from falling into the well. The wiper disc is contained within a fabricated steel frame which mounts beneath the spider or rotary table. Ideal for workover operations, the assembly is conveniently sized, inexpensive and built to carry the load.

LOW PROFILE - PIPE WIPER

SINGLE, DUAL & DUAL SPLIT - PIPE WIPERS

Texas Products WSD pipe wipers are molded from a specially formulated compound that is resistant to mud, water and oil-based drilling fluids. They are designed to resist cutting, tearing and abrasion from a variety of drilling fluids. Pipe size cutting rings are identified in the center of each pipe wiper. As the pipe wiper wears, it can be re-cut to the next cutting ring available, allowing longer use of the wiper.

SINGLE - PIPE WIPER

DUAL SOLID - PIPE WIPER

DUAL SPLIT - PIPE WIPER

* Please specify I.D. when ordering.

SINGLE pipe wipers have a hard rubber ring molded near the outer surface to prevent the wiper from being pulled through the master bushing.

DUAL SOLID pipe wipers are molded with two (2) hard rubber rings for reinforcement. Dual wipers provide a flexible double lip where oversize tool joints and protectors are used. Their wide slots allow mud to drain easily.

DUAL Split pipe wipers have two (2) metal rings molded inside to allow the wiper to split and wrap around drill pipe when using a solid master bushing.
