

**TYPE TX-JU HIGH PRESSURE TUBING STRIPPER**

This rugged stripper cleans oil and other material from tubing as it is being pulled and prevents escape of oil or gas while running or pulling tubing under pressure. The stripper employs a heavy duty rubber that can be changed without removing the stripper from the wellhead. The unique accordion style design of this rubber allows easy passage of tubing couplings without leakage. The flexible, tight gripping rubber works equally well on round, square or hexagonal shapes. The major components are manufactured of tough machined steel for long, trouble free service.

The housing of the type 'TXJU' stripper is machined with a flanged bottom connection for easy attachment of API flanges. Six 1 1/8" stud bolts transmit tubing load from the packing gland to the housing. These bolts also provide the means of adjusting the packing rubber, allowing three inches of travel for adjustment and take-up wear. The rubber may also be adjusted easily by backing off the stud nuts and setting tubing weight on top of the stripper. The flat top provides a suitable base for any Guiberson or type "G" Oil Country Tubing Spider.
